

Use fire extinguishers correctly

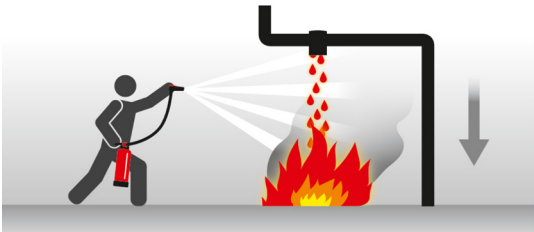

Observe wind direction, always proceed with the wind.

Spray from below into the embers and not into the flames. Keep enough distance so that the powder cloud envelops the entire fire as much as possible. Extinguish in bursts.

Extinguish wildfires from the front and below.

Do not extinguish from behind or above. Always extinguish the material on fire, not the flames.

Extinguish dripping or flowing fires from top to bottom.

Always from the point of exit to the burning pool.

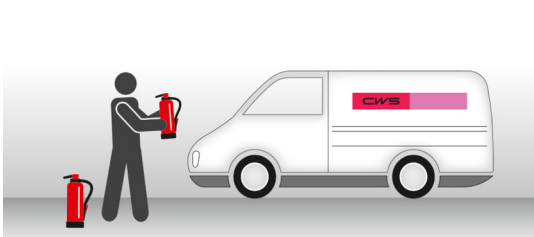

For larger incipient fires, use several fire extinguishers at the same time.

Delete simultaneously achieves a greater effect, please pay attention to each other and coordinate.

Pay attention to reignition.

Do not leave the scene of the fire, but observe.

After use, have the fire extinguisher repaired by a specialist company.

Under no circumstances return the fire extinguisher to its location, it is no longer ready for use.

We offer comprehensive fire protection for your safety.
